

Want a movie recommendation but not sure what to suggest

I love watching movies in my spare time, so I've seen lots of movies before. I'm always looking for new movies to watch of all genres, and a recommender system is the perfect way for me to get tailored suggestions. As a user, I want my profile to log the movies I've already seen and the recommendations that it has already suggested; I want to see things I haven't seen before! If my profile is memory-less, it won't be giving me the experience I want.
